## **Auto Supplier Needs Help, Looks to EnviroServe**

Dunn, NC – *EnviroServe Chemicals' EnviroClean 3777* and *EnviroSeal 3302* has been approved and is now being used by an automotive parts manufacturer for their paint pretreatment process for automotive drive shafts.

*EnviroClean 3777* was custom formulated for this BMW drive shaft contract manufacturer to clean the heavy duty lubricating oils used in the manufacturing process. *EnviroSeal 3302* was added to the cleaning process to provide a rust resistant coating prior to painting.

The two *EnviroServe* products have replaced three products that have been used in this process for several years. The new process outperformed the current system by a large margin in all aspects of the operation.
