Large Trailer Manufacturer Turns to EnviroServe with Adhesion Issues

Dunn, NC – *EnviroServe Chemicals* has recently installed its *EnviroKote™* Zirconium Paint Pretreatment Technology at one of the largest Trailer Manufacturers in the Midwest.

After paint adhesion issues, water consumption concerns, and a green initiative in place, this trailer manufacturer has changed from its conventional iron phosphate process to *EnviroServe's EnviroKote™* Technology.

This change in process has significantly increased paint finish quality and adhesion, as well as corrosion resistance and paint delamination. There has also been a significant decrease in water consumption due to the rinse free option that comes with *EnviroKote™* manual spray processes, as well as an overall increase in production output.

For more information on *EnviroServe Chemicals* contact: 910.892.1791 (main) 910.892.5765 (fax) 603 South Wilson Avenue, Dunn, North Carolina 28339. www.enviroservechemicals.com. Sales@enviroserveinc.com.
