May. 2015

Worldwide OEM of Refrigeration Products Goes Zirconium

Dunn, NC – A worldwide leader in refrigeration products converts their existing iron phosphate paint pretreatment system to *EnviroServe's EnviroKote™* Technology.

After years of using iron phosphate prior to painting, this company reached out to *EnviroServe* after their current supplier was not able to meet expectations. *EnviroServe's EnviroKote™* Zirconium exceeded their requirements by 20%, making the decision to change easy.

After months of testing and planning, the changeover went smoothly and without hiccups. This company's contract powder coaters plan to join them in the change in the coming weeks.
